

SPEAKr Text to speech application and audiobook maker

Speaker is a text to speech program developed by Arinda Anthony out of sheer boredom. This application transforms PDF, TXT and DOCX documents into speech and it reads them out. Due to the small size of this program, extra voices are not added to this package to avoid bulkiness.

Any voices downloaded and installed can be used. Base controls added include, play controls and volume controls. Being as it is a completely free application, selling this application is a crime.

SPEAKr USER MANUAL

Welcome to the SPEAKr text to speech application user manual, first off I designed this app to be very easy to use, I do not know why you are reading this but I wrote it nonetheless.

Starting the application

Start this application by clicking on your desktop or startmenu shortcut to start this application. You can also go directly to C:\ProgramFiles(x86)\SPEAKr\start.exe but i would not recommend it.

Using the application

After opening the application, you will see a set of controls including developer, updates, about, browse, load recent, speed and volume controls, save and start, Direct SPEAKr and exit. Developer tells you about me. updates will check for updates, about will tell you about the SPEAKr application, browse will allow you to select a document you wish to read, load recent will allow you to read recent documents, speed and volume controls will set the speed and volume controls for the reading, save and start will load your document and read it with your settings, direct SPEAKr will start the direct SPEAKr applet, and exit will exit.

Using direct SPEAKr

Direct speakr will allow you to type or copy and paste words into the text area which will be read out loud.

SPEAKr Licensing

GNU general public license

This software is released by the developer under the GNU license which means it is free to use and distribute with the authority of the developer and to re-edit the code given the result is also released under the same GNU GPL license. For more information of access to the source code contact the developer at arindaanthonyr@gmail.com
